Platero, Biñan City, Laguna, 4024 | isaiahnoelpulidosalazar.github.io

EDUCATION

BACHELOR'S DEGREE Information Technology STI College Santa Rosa	2022 – Current
SENIOR HIGH SCHOOL STI College Santa Rosa	2020 – 2022
HIGH SCHOOL Marie Margarette School, Inc.	2016 – 2020
ELEMENTARY Marie Margarette School, Inc.	2010 – 2016

EXPERTISE

Web Development | Android Development | Desktop Application Development | Database Management

TECHNICAL SKILLS

HTML/CSS | JavaScript | PHP | .NET | .NET Framework | C# | Java | Python | MySQL | Microsoft SQL Server | SQLite

EXTRACURRICULAR ACTIVITIES

LEAD PROGRAMMER | STI TAGISAN NG TALINO: CODEFEST (ANDROID DEVELOPMENT) 2022 – 2025

- **Local Champion (3 consecutive years):** Ranked 1st out of all local competing teams by developing high-performance Android applications within a **6-hour time limit**, strictly using **Pure Native Android (No external libraries/frameworks)**
- **Cluster Level 1st Runner-Up (2-time awardee):** Represented the campus at the regional level, competing against top teams in the cluster
- Served as the **primary architect** for application logic, managing the **full development lifecycle** from UI/UX implementation to back-end integration and **SQLite** database management
- Demonstrated proficiency in **Java and XML** to build functional, bug-free features under competitive pressure

PROJECTS

AUTOLANDIA SALES AND REVENUE REPORT GENERATION SYSTEM (C#, PYTHON, SQLITE) Capstone Project

- A capstone project providing automated sales tracking, salary calculations based on performance, and activity records to reduce manual work and improve reporting accuracy

ANDROID DEPENDENCY (JAVA, XML, SQLITE)

- An Android library that eliminates boilerplate across projects
- Architected **EasySQL**, a simplified **SQLite** wrapper that abstracts complex CRUD operations into single-method calls
- Built an asynchronous **URLRequest** utility to handle HTTP requests with integrated callback runnables
- Engineered reusable UI components, including a **FlippableImageView** with custom animations and a **SimpleList** view for dynamic data binding, and built the **Check** and **Convert** custom classes for data validation and conversion

NUGET PACKAGE (C#, .NET)

<https://www.nuget.org/packages/com.github.isaiahnoelpulidosalazar.nugetpackage>

- A NuGet package for .NET that simplifies validation through a custom **Check** class, a custom **Convert** class for data conversion, and a dedicated class that simplifies file IO through **SimpleFileHandler**

PYTHON BUNDLE (PYTHON)

<https://pypi.org/project/pythonbundle/>

- A PyPI package for **Python 3.10+** that provides useful tools for data conversion and validation, a custom **EasySQL** class for simplified **SQLite** operations, a custom excel file handler, and a custom file IO handler
